Abstract (en)

[origin: WO2004104948A1] The invention relates to a device for checking banknotes, comprising a linear sensor and a linear light source, wherein the banknote is moved between the sensor and the light source and past them for the purpose of verification, and the sensor detects light emitted by the light source and transmitted through the banknotes. According to the invention, the linear sensor and the linear light source are provided with a respective aperture in such a manner that the aperture of the light source is equal or smaller than the aperture of the sensor.
