Abstract (en)
The section has a sealing path (DB1) passing through a lower side of a concrete-base plate (BP) and forming a creep-waterproof bordering surface with the plate. Another sealing path (DB2) passing through a wall arrangement between a concrete layer of an inner shell and an outer shell and forms another creep-waterproof bordering surface with the layer of the wall arrangement. The sealing paths overlap each other. An independent claim is also included for a method for manufacturing a basement tank as a concrete-construction unit.
