Abstract (en)  
[origin: EP1630319A2] The self-supporting mounting for a side screen has a mounting device formed from two flat retaining clamps (1,2) converging at an acute angle and clamping the side screen panel (3) on both sides by their inner edges. At their narrower ends the clamps are interconnected in one piece by a flexible bridge. At their wider ends the clamps have means for the connecting of these ends after the clamping of the panel, and have fastening members angled by 90 degrees for the locating and screwing of the retaining clamps to the outside wall.
