Abstract (en)

[origin: EP1630325A1] The assembly has a sliding arrangement that is split into two parts (122, 124), and a motor actuating drive operating on the part (124). A manual drive operates on the part (122), which unavoidably moves with the part (124), during unlocking operation of the device. The part (122) is locked by cylinders. A joint (126) transfers the movement of the part (122) to the part (124), when a mechanical force is applied on the part (122).
