Abstract (en)

The carriage has a support (44), and support rollers (56, 64) respectively movable in rotation around rotational axes (A1, A2). The support rollers (56, 64) are connected to the support around a fulcrum pin (P). The roller (64) is movable in translation with respect to the support along the axis (A2). The axes (A1, A2) are maintained coplanar in a sliding plane. The rollers (56, 64) extend in a guiding rail (22). An independent claim is also included for a sliding door of a motor vehicle.
