Abstract (en)
[origin: EP1630827A1] There is provided an apparatus (1) for assembling a wire harness and a method of the same for allowing a sub-harness to be easily wired. The wire harness includes a plurality of sub-harnesses. Each sub-harness includes sub-harness identifying data for identifying the sub-harnesses each other. The apparatus 1 includes a wiring board (10), LEDs (11), a bar code scanner (12), and a controller (13). The sub-harnesses, namely, the wire harness is wired on a surface (14a) of a main board (14) of the wiring board (10). The LEDs (11) are disposed corresponding to turning points and terminals of wires as the sub-harnesses. The bar code scanner (12) reads the sub-harness identifying data. The controller (13) identifies the turning points, through which the sub-harness identified by the sub-harness identifying data is to be wired, and the terminals to be disposed on the wiring board (10). The controller (13) switches on the LEDs 11 corresponding to the turning points and the terminals, and off the other LEDs.
