Abstract (en)
[origin: FR2855094A1] A machine for manufacturing solid products comprises a feed system for a powdered material, a matrix to receive the material and upper (8) and lower (9) dies controlled by cams (12, 24) with synchronized rotation. A machine for manufacturing solid products comprises a feed system for a powdered material, a matrix to receive the material and upper (8) and lower (9) dies controlled by cams (12, 24) with synchronized rotation. At least one of the cams, i.e. the upper one (24) has a deformable outer surface that allows it to impart particular movements to the lower die (9) on the level of the matrix, especially to promote the ejection of a solid product from the matrix on completion. The lower cam can also have a deformable surface, designed to give a pre-compression phase.
