Abstract (en)

[origin: WO2004109619A3] This invention relates to a management and authentication system of the radio transmission codings in remote control devices which use radio frequency transmitters to dialogue with the fixed radio receivers. The system includes a personal computer loaded with a programme for storing at least the codings of the remote controls, and a portable, electronic device (Memory Box) for storing and programming, connectable to the personal computer. The stored codings of the remote controls are transferred from the personal computer to the electronic device (Memory Box) and from said electronic device to the radio receivers to be configured, wherein they may be authenticated by an authentication and loyalty electronic device.
