Abstract (en)

[origin: EP1632146A1] The container has two hinged triangular plates (16) of the same size connected together through a plate strip whose width is not less than the thickness of the triangle (12). The plate strip is connected in one piece to the two plates along an edge of each plate. The connection region between the plate strips and relevant plate forms a weakened line. One plate part is provided in the region of a second edge of the two plates and this plate part can be fixed e.g. stuck on the inside of at least one of the two plates in the region of its second edge.
