Abstract (en)  
Dental plaque on the teeth and molars is a general cause of inflammation of the gums and tooth decay, which can result in the occurrence of cavities in the teeth and molars. Particularly in the interdental spaces between the teeth and molars it is generally difficult to remove the formed dental plaque by means of a conventional toothbrush. The invention relates to an interdental cleaning device. The invention also relates to a handle for use in such an interdental cleaning device. The invention further relates to a holder for interdental cleaning means for use in such a cleaning device.
