Abstract (en)

The filling process for bottles (3) involves moving the bottles of a bottle carrier (9) with the bottleneck (3.1) at a distance from the issuing aperture (6) of a filling element (1). During the filling process, the fluid is supplied to the bottle as a free jet (12) in the direction of the filling element axis (VA). The container is anchored about an axis perpendicular to the filling element axis, so that the bottle axis (FA) encloses an angle (alpha ) with the axis of the filling element.
