Abstract (en)
[origin: EP1632595A2] A knitting machine (1) with a knitting area (2) and a weft feed device, comprises a conveyor device arranged to feed wefts to the knitting area in a transport direction, the conveyor device comprising transport elements (10) with thread holders, and the transport elements being separate from one another and joinable to form a feed assembly through a functional area (4) in the transport direction and individually movable in a returning area. An independent claim is also included for a knitting process comprising: (1) conveying transport elements with thread holders joined together to form a feed assembly through a functional area in a transport direction; and (2) individually moving the transport elements in a returning area.
