Abstract (en)  
The cylinder has a stator (S) and a rotor (R) with a key channel. Bolts (Z1-Z4) are arranged for rotary release of the rotor. Each bolt has a core pin (K1-K4), where each core pin has an inner part (20) and an outer part (10-13) that are undercut. The length of the outer parts and the length of the associated housing pin provide a length, which is greater than a length of a hole in which the housing pin is mounted.
