Abstract (en)

[origin: EP1632723A1] The mounting system for a vapor extraction hood has a mounting plate (2) for the holding of a suction housing and with a protrusion on each opposite-lying spaced apart side. A retaining plate (4) is provided for the mounting of the chimney mantel. A locking device is provided to prevent an inadvertent release of the retaining plate from the mounting plate. In the assembled state of the mounting system the locking device enables a relative movement between the retaining plate and mounting plate parallel to the longitudinal axis of the guide rails (4.2) of the retaining plate in one direction (12), and prevents it in the opposite direction.
