Abstract (en)
A device for a laser simulator (1) for simulating the firing of a weapon with a parabolic, homing or otherwise guided high ammunition trajectory or combinations thereof. A barrel (2) constitutes a launch ramp for the missile weapon and is elevated at an angle of elevation \pm relative to the line of sight (I) in connection with the firing of the missile weapon. The laser simulator (1) contains a laser unit (3) arranged in the barrel (2) with a mechanical and optical axis (x a) in a known relationship relative to one another and relative to a center axis for the barrel (2). An optical aiming unit (4) containing an optical wedge (6) is arranged in front of an optical outlet (9) on the laser unit (3). The optical wedge (6) is disposed so as to deflect a beam of light emitted from the laser unit (3) at an angle of deflection ΔE corresponding to the angle of elevation \pm .
