Abstract (en)

[origin: WO2005070504A2] The invention relates to a training device, for the muscles of the pelvic floor in women, comprising a flexible main body (1), for introduction into the vagina and which has a compression piece (1) with a spherical working surface (2). According to the invention, an substantial improvement in the training effect can be achieved, whereby the compression piece (1) is defined by two annular constrictions (3, 5), connected axially on one side to a stop section (4) with a stop surface and connected axially on the other side to a retainer section (6) to which a display device is fixed.
