Abstract (en)  
[origin: US7322112B2] A kitchen slicer for cutting items to be cut such as fruit, vegetables etc. is proposed, with a base, to which a blade is fixed, which is arranged on an edge of a discharge plate, and an exchangeable insert, which can be fixed to the base in different positions for setting different cutting thicknesses. The insert forms a guide surface on which the items to be cut can be moved toward the blade. The different positions including a safety position in which an end side of the insert is arranged adjacent to the blade, in particular in such a way that the guide surface lies at the level of the blade or above it. In this connection, the insert comprises on its rear end side at least one projection which lies below the blade in the safety position.
