Abstract (en)
[origin: WO2004101366A2] A glove dispensing package including a plastic container and a top sheet. The plastic container has walls that define a cavity, and an opening thereof. A plurality of gloves are disposed within the cavity. A top sheet is attached to the plastic container over the opening to seal the cavity, such that the glove dispensing package is substantially impervious to moisture. The plastic container may have a flange formed around a periphery of its opening. The top sheet may be affixed to the flange via heat sealing or using a pressure sensitive adhesive. The top sheet may have a perforated area separated from the rest of the top sheet via a perforation. The gloves may be stacked unfolded or folded in half within the cavity of the plastic container.
