Abstract (en)
[origin: WO2004085276A2] The invention relates to a fluid product dispenser. The inventive dispenser consists of: a fluid product container (10) which is designed to house the fluid product; and a dispensing head (2) which is mounted to the container (10) in order to extract the fluid product therefrom, said head (2) defining a dispensing chamber (26) which is connected to the container by means of an inlet valve (25, 215) and which is connected to a dispensing port by means of an outlet valve (237, 222). The invention is characterised in that the aforementioned chamber (26) comprises an elastically-deformable actuating wall (231) which is pressed so as to generate sufficient pressure inside the chamber in order to close the inlet valve and open the outlet valve.
