Abstract (en)
[origin: WO2004092521A1] The invention relates to an automatic sliding door comprising at least one sliding wing clutched in operation by means of a driving element which can be driven by a drive motor in such a way that the wing (s) of the door (1, 3) opens and closes. Said door wing (s) (1, 3) consists of a frame made from profiles (15, 17, 20) maintaining a sheet of glass. A lighting element fed with electric energy by a power supply system is embodied at least in one of profiles (15, 17 20).
