Abstract (en)
[origin: WO2004099843A1] The invention concerns a fine tuning device for moving and/or tilting an object. The inventive fine tuning device is characterized in that a support element can rotate about an axis of rotation being guided by a guiding element. To provide tilting between the support element and the guide element, a guiding plane is defined which intersects the axis of rotation by an angle other than 90 DEG ; to provide displacement, the object is fixed on the support element with a lateral offset relative to the axis of rotation.
