Abstract (en)

A drawer or a storage container can be divided into several compartments by crosswise arranged partitions (T1, T2, T3, T4) . The partitions (T1, T2, T3, T4) are held in place by joint elements also forming the intersections. Each of the intersection units is assembled of four angles formed by elements (P1, P2, P3) with H-shaped cross sections. Comb-shaped partitions can be joined from below the bridge (1) or from the top (T3) as well as from both sides (T1, T2, T3, T4) in case of a particularly high partition required. There can be flat elements (P1, P2, P3) used for joining two parts in a line.
