Abstract (en)

The present invention relates to a means for securing reversible rails (1) of dual rail window regulators intended to allow pre-assembly of the window regulators on the door (2) of the vehicle. The means in question have a design capable of being used both in a first position and in the reversed position thereof, this is, according to a rotation through 180° such that with this new means of securing it is possible to make use of a single rail for the front and rear side.
