Abstract (en)
    Printing machine comprises at least one printing group (03), a folding device, and at least one turning and mixing stage (07) feeding a web (04, 06)
    from the printing group to the folding device. The path of the web projected in the horizontal direction from the printing group to the folding device
    has a bend in the turning and mixing stage. The turning and mixing stage has an inlet-side longitudinal cutting device (08) for cutting the web into
    two partial webs and at least two horizontally displaceable turning bars each surrounded by a partial web. Independent claims are also included for
    alternative printing machines. Preferred Features: The turning bars are parallel to the path of the web between the printing group and the turning and
    mixing stage.
