Abstract (en)

[origin: EP1634850A2] The invention concerns a jack (1) with a handle (2) for drawing the jack (1), where the handle (2) has at least two positions, a first position in continuation of the jack (1) for drawing it and a second, locked position substantially above the jack (1) in order to act as carrying handle for the jack (1). Hereby is achieved that by means of the handle (2) one may place the jack (1) at the right position under e.g. a vehicle to be lifted. As one may also lock the handle (2) at a position above the jack (1) itself, one may carry it just by lifting the handle (2), without using a separate handle.
