Abstract (en)
[origin: EP1635014A1] Lock comprises a switching mechanism which releases a bolt (21) for an enable time and locks again after the enable time. The bolt handle can be manually rotated and the rotating position is connected to a display. The bolt is locked by blocking elements only in both its end positions. Preferred Features: The bolt has a blocking bolt (5) which is connected to a locking plate (9). The bolt handle is formed as a rotary head having an axle (23) which is connected to a pivoting lever (11) for rotary movement in the sliding direction of the bolt.
