Abstract (en)  
A digital media receiver 100, method, and computer readable medium bearing instructions for transferring information from media 112 to a connected computer system 108 are described. The receiver 100 includes a memory 240 for storing instructions for execution, a first interface coupled with a processor 200 for transmitting a signal representative of media information to a media presenting device, a reader 110 coupled with the processor 200 for transferring media information to the receiver 100, a second interface 114 coupled with the processor 200 and adapted to transfer information read by reader 110 from media 112 to a connected computer system 108, and the processor 200 connected to the memory 240 for executing the instructions enabling the processor 200 to transfer information transferred by the reader 110 to the connected computer system 108 using the second interface 114. A method aspect includes responsive to input, reading information from media 112 in a reader 110 of a digital media receiver 100 and transferring the read information from the media 112 to a connection interface 114.
