Abstract (en)

[origin: WO2004113110A1] The invention relates to a device for fixing a fuel container (1) to a motor vehicle, said container partially (3) consisting of a light metal material or an A1 alloy material. According to the invention, at least one hook-shaped container connecting element (9) which is open in the direction of displacement is provided on the outer wall of the container, and can be connected to a corresponding connecting element (5.1) provided on the motor vehicle and/or can be locked thereto by means of at least one fixing element (7).
