Abstract (en)  
[origin: WO2004106628A1] The invention relates to a belt for a processing apparatus intended for treating a fiber web. The processing apparatus comprises a belt run (2) adapted to travel around at least one guide element (3). Outside the belt run is provided at least one counter-element (5) creating a contact surface with the belt, such that between the belt (2) and the counter-element (5) is established a web processing zone (N), the web to be treated being passed therethrough. The belt of the belt run comprises a layered structure, including a metallic outer layer (10), intended for contact with a fiber web (W) to be treated, and at least one backing layer (11) bonded to the metal layer's inner surface.
