Abstract (en)

An anti-slip sole for footwear, particularly for safety shoes, is described, which comprises a heel insert (1) made of a first elastomer and a sole (4) made of a second elastomer which partially incorporates said heel insert (1) so that it remains exposed in the heel area of said sole. The hardness of the first elastomer of the heel insert (1) is less than that of the second elastomer of the sole (4). A method for producing said anti-slip sole by moulding or by pouring of an elastomer is also described.
