Abstract (en)

The sensor (50) has two elementary sensors (51, 52) respectively with bodies (510, 520) to receive axial brake release forces. Switches (513, 523) detect the course of the bodies under the action of force applied against springs (512, 522) respectively. The bodies (510, 520) present an axial clearance equal to the course. The spring (522) has rigidity greater than that of the spring (512). An independent claim is also included for a brake compression and release detector.
