Abstract (en)  
[origin: WO2004113189A1] The invention relates to a sealing system, for containers with an opening, comprising a sealing cap having a base for covering the opening, a sleeve extending from the above and a security ring at the edge of the sleeve away from the base, preferably connected to the sleeve with a pre-determined breaking line and preferably comprising at least one vertical cut and a wall section surrounding the opening at least partly overlapped by the sleeve of the sealing cap. The sealing system (1) is characterised in that at least one tab (25), overlapping the outer circumferential surface (24) of the wall section (5), is provided, arranged in the vicinity of the security ring and laterally enclosed by the same in the circumferential direction.
