Abstract (en)

[origin: WO2005001179A1] The invention relates to a heald frame (1) comprising at least one heald frame rod (2), on which a damping element (12) can be displaced in relation to the longitudinal direction of the heald. The displaceable mounting of the damping element (12) improves and facilitates the alignment of the heald (8) and produces the required damping action over the entire displacement course of the heald (8).
