Abstract (en)

[origin: WO2005001337A1] The invention relates to a device (2) comprising a boiler (1) for generating steam, used for example in the steam-treatment of hair. The boiler (1), which is located in a recess (15) comprises a refill cap (3) and a steam outlet (4) in its upper region. The steam outlet (4) is situated in the upper lateral region (5) of the boiler (1). The boiler (1) is provided with an outflow opening (6) below the steam outlet (4), the lower edge (7) of the steam outlet (4) and the lower edge (8) of the outflow opening (6) defining a height (H) of a boiling chamber (W). The steam outlet (4) communicates with a steam conduit coupling (9) of a steam conduit (10) and the outflow opening (6) communicates with a sealing part (11) of the recess (15).
