Abstract (en)

[origin: WO2005015547A1] The invention relates to a method for analysis of vocal signals of a speaker (lambda), wherein a probability density, representing the resemblance between a vocal representation of the speaker (lambda) in a pre-determined model and a pre-determined set of vocal representation of a number (E) of reference speakers in said pre-determined model is used and the probability density hence used to predict information about the vocal signals. <>
