Abstract (en)
[origin: WO2004112358A1] A mobile telephone has a circuit card with RF circuits for the telephone, a casing (1) in which the circuit card is fixable and which has a number of electric components such as battery, loudspeaker (4), microphone, vibrator (3), antenna (6), etc. The electric components are connectable to the circuit card by the intermediary of a number of conductor paths (21-26) disposed on or in the material of the casing (1). The conductor paths (21-26) are converged to a central connection unit (21) by the intermediary of which they are centrally connectable to corresponding conductor paths on the circuit card.
