Abstract (en)
[origin: EP1639918A1] The plinth cover has a front fascia panel (2) which in the fitted state is movable relative to the cross beam (1) in a vertical direction in the useful position of the appliance against the action of a spring which acts between the front panel and cross beam. The adjustment is achieved through a movable spacer which is mounted between the front panel and cross beam. the front panel is fixed by sliding onto the cross beam horizontally in the useful state of the appliance and then locking the two parts. The spacer has a stopper (16) rotatable against a worm thread provided on the cross beam.
