Abstract (en)

[origin: EP1640125A1] The cutting device (18) has associated adjusting devices which are coupled to a counter bearing (19) to produce one active connection. A servo drive (27) is associated with the cutting device and a servo drive (26) is associated with the counter bearing, with the servo drives being connected to one another by a control (28). Independent claim describes extruding machine producing lines of cigarettes, filters etc and having cutting machine as above. Independent claim describes method for cutting line of material where the length of the section can be adjusted by selectively moving the cutter or the counter bearing.
