Abstract (en)

The present invention relates to a speed and direction control apparatus controlling the changes in direction and speed to be traversed by carrier systems, said apparatus comprising a button assembly slot (8) embodied on a supporting body (1); a button (3) positioned in said button assembly slot (8); a button contact block (4) positioned on said supporting body (1) and under the button (3); and at least one obstruction (11.1) positioned on the orifice that is opened on said button (3), and formed along the inner circumferential surface of a circular formation having essentially a smaller diameter as compared to the diameter of said button (3).
