Abstract (en)

[origin: WO2005002875A1] The invention relates to a desk container, in particular for use in a house desk. Such containers comprise limiting walls which are connected to each other by means of border edges (14, 20a, b, c) and form a bottom and/or lateral walls. The aim of said invention is to develop a desk container which is compactly packed and designable in different forms. For this purpose, an inventive modular system consisting of a plurality of basic elements (10, 12, 22) is used. Said basic elements are connectable end-to-end or at a distance to each other by means of connecting elements (30, 32) at the level of border edges (28) with a separation gap (36) in such a way that containers of different geometric shape are formed.
