Abstract (en)

[origin: WO2004111352A1] A utility portal, including - a frame including a base plate and at least one side which extends substantially orthogonally from an outer peripheral edge or edges of the base plate - a cover engageable with the frame; wherein said frame can in use be raised from a first position substantially below a new surface plane to a second position to align with the new surface plane substantially without disturbance to an existing surface adjacent to the frame.
