Abstract (en)

[origin: WO2005008008A1] The invention relates to a deflection device for a motor vehicle window lift comprising a deflection element for deflecting a traction means pertaining to said window lift and spring means for tightening the traction means. According to the invention, the deflection element (3) is moveably mounted on a receiving element (1) and can be placed in a plurality of different positions on the receiving element (1) by the spring means (4) arranged on the receiving element (1). The receiving element (1), deflection element (3) and spring means (4) can be fixed to the window lift in the form of a pre-mounted module.
