Abstract (en)

[origin: WO2005001278A1] Known devices for supplying fuel comprise a preliminary filter disposed in a drive pipe leading to the nozzle of a suction jet pump. Such devices are disadvantageous in that the separate installation of the preliminary filter and the nozzle in the drive pipe is time-consuming and expensive. According to the invention, the nozzle (22) is therefore linked with the preliminary filter (23) to give one piece, thereby reducing production costs and simplifying installation of the device.
