Abstract (en)

[origin: WO2005008375A2] A system and method are provided for electronically managing remote review of documents that are stored on a central repository. The remote review system advantageously enables a remote reviewer, lacking repository access, to remotely review and record decisions in respect to documents stored in the repository and then electronically integrate those remotely made decisions back into the repository. In this way, the inventive system and method promotes efficiency and consistency in responding to document requests for legal purposes.
