Abstract (en)

A closure device (1) with easier tensioning, particularly for fastening a first flap (2) and a second flap (3) of a sports shoe (5), which includes a first band (6), which wraps around a quarter (4) of the shoe (5) over a portion of its perimeter and is rigidly coupled thereto in an intermediate point (7). The first band (6) supports, at a first end (9), a first ring (10) inside which a second band (11) slides, the second band (11) being rigidly coupled, at a first end (12), to the first band (6) in a point that is comprised between the intermediate point (7) and a guiding point of the first band (6) on a second ring (14). The second band (11) is associated, at a second free end (13), at the second ring (14) with which the first band (6) is slidingly associated, the second free end (15) of the first band (6) being manually tensionable and fastenable selectively to itself in a removable manner by virtue of a temporary grip means (17,19).
