Abstract (en)

[origin: EP1642830A2] The filling plant, especially for liquid and paste substances such as foodstuffs, has a horizontally disposed transporting device (5) for the containers (6) to be filled. The transporting device by a front side is attached to a vertical supporting wall (2) of a machine frame (1), whereby the space below the transporting device is generally free of other components. The drive of the transporting device is effected from the rear side of the supporting wall. Independent claims are also included for the following: (a) a filling station (8) in which a transporting device and/or add-on components have drive shafts driven from the rear side of a supporting wall of a machine frame; and (b) a filling unit in which the supporting wall has a mounting plate and a cover plate facing the transporting device.
