Abstract (en)

[origin: EP1642846A1] The assembly has two containers containing products, and a movable actuator component (50) to actuate distribution of the products in a mixed or separate state. An intermediate body separates from the component and comprises two skirts. The component has two rigid tabs which contact the intermediate body in two support zones (170a, 170b) spaced apart from each other in order to cause the intermediate body to tilt.
