Abstract (en)
[origin: EP1643122A2] A vibration damping technique for a wind turbine system (10) is described. The wind turbine system (10) includes a vibration damper (62), which provides a variable signal (68) to control torque produced by a generator (50) of the wind turbine system (10). The variable signal (68) is based on generator speed and has a first local peak value based on a resonant frequency of tower side-to-side oscillation.
