Abstract (en)

[origin: WO2005007015A1] The invention relates to an electric device (1) for interdental cleaning comprises an elongated casing (2), an electric motor (22) provided with an eccentric mass (23) and a tool holding fixture (5). The inventive device is characterised in that it comprises a long support structure (3) comprising all electric components including a cell (13) or a battery, thereby making it possible to obtain an electric interdental cleaning device which avoids the inconveniences of the actual state-of-the-art. A reusable small device which is particularly practical, easy to handle and takes into consideration, in particular ergonomic features is also disclosed.
