Abstract (en)

[origin: WO2005007296A1] The invention relates to a centrifuge comprising two centrifugal drums (2, 3), said centrifuge being characterised in that both centrifugal drums can respectively be rotated about two different rotational axes (A1, A2) and each comprise a packet of disks. One of the rotational axes preferably lies respectively in the axis of symmetry of the centrifugal drums (2, 3) and the other rotational axis (A2) is perpendicular to the first rotational axis and crosses the same.
